A SCHEMATIC METHOD FOR ESTIMATING THE HEALTH STATUS OF THE CHILD*

C. EDGERTON CARTER, M. D., Los Angeles
 (Reprint by permission of California Board of Health Bulletin)

Preventive medicine in children is apparently the most neglected and the most worth-while field in medicine. "Preventive medicine" is in a way a misnomer, for it includes preventive methods as applied to child health and may be entirely educational. Rarely, however, is the corrective problem in the child so simple, for our present neglect of the preschool years fosters complications which may demand the combined effort of physician, parent and educator for their

PHYSICAL EXAMINATION, HEALTH STATUS CHART

KEY: Open Squares—Chest; Solid Circle—Head.
